Introduction

Swintech Pty Ltd is a specialist provider of integrated security and home automation systems and services, in both the residential and business/commercial markets.

Established in 1999, Swintech focuses on delivering complete end to end, customised solutions, with much time and focus spent in planning and building diversity into our product range. By using our industry expertise and hands on experience in all aspects of electronic security and structured cabling, our dedicated solution design and technical staff ensure that we deliver only the highest quality solutions and service.

Innovative Security Solutions

Our Service

Swintech bases its core business around providing innovative electronic solutions, rather than just providing stock standard product packages compared to industry competitors.

Our service begins with consultation from one of our solutions executives in conjunction with your input, incorporated with a site inspection and followed by a comprehensive design proposal. For larger scale projects such as building projects and corporate site installations, Swintech project manages all of its designated components to ensure our solution design and your needs are implemented through to completion.

Following installation of the solution, Swintech also offers preventative maintenance services where our highly trained technical staff can inspect and service your system to ensure potential problems are identified and addressed. This allows you peace of mind that your system is functioning at its optimal level. Swintech is contactable seven days a week to ensure you receive the highest level of support and service assistance.

Our Supplier Partners

Swintech Pty Ltd is a proud distributor and installer of the complete range of Ness Security Products who are Australia's leading designer and manufacturer of the complete range of security products.

We also distribute and install Commax and Urmet video and audio intercom systems, Rexel Australia products which include Panasonic security and home entertainment systems and Fadini electric gates. We also deal with many other manufacturers and suppliers where required to ensure our customers receive the appropriate solution.

Our Core Products and Systems

Alarm Panels & Systems – Our alarm system products feature leading digital technology and include hard wired and wireless alarm panels, medi alarms, hard wired and wireless motion sensors and reed switches and glass break sensors.

GPS Asset Management & Tracking Systems – Swintech can supply and install a variety of GPS tracking solutions which can be customised to meet your needs. These include asset security, control and fleet management solutions, and these systems can be monitored via a 24hr security monitoring centre.

Access Control Systems – Our access control systems can be customised to meet the needs of the individual for residential, business or commercial premises. These include card and tag, long range readers and biometric (finger print and face recognition) technologies, and are expandable and diverse with the ability to link multiple systems and features such as lift and door controls etc.

Closed Circuit TV Systems – Swintech has extensive experience in the supply, design, installation and servicing of CCTV solutions. These can include domestic and commercial system applications, to multi site networked solutions.

Audio/Video Intercoms – We offer a wide range of analogue and digital intercom systems for residential, business and commercial premises. These are available in audio and video, black & white or colour and can be interfaced with electronic gates/latches, access control and MATV systems as required.

Electronic Gates – Custom designed and made to all types of specifications and applications. Products such as electronic gates and latches can also be interfaced with our range of security, intercom, alarm and access control products to give you an end to end solution.

Automation & Structured Cabling Systems - Tomorrow's technology today. Our range of automation and structured cabling systems are designed to maximise the use of emerging technologies, ideal for the home or office. This technology allows the user to connect and share devices such as TV, VCR, DVR, PC, telephone, internet, security systems, home appliances, lights, air conditioners, garage doors, security and irrigation systems to the 'home automation' controller providing the user with a 'smart home or premises.
